----------------------------	---

Condition/Concern

Some customers may question the percentage of UV protection or tint offered by the windshield or side glass.

Sunroof reduce to 10% or less.

Recommendation/Instructions

Ultraviolet Ray Protection:

Windshield reduces UV rays down to 4% or less.

Front side door glass reduces UV rays down to 35% or less.

Rear window, doors, or 1/4 glass reduces UV rays down to 35% or less (Without RPO AJ1 or AKO).

Rear window, doors, or 1/4 glass reduces UV rays down to 10% or less if equipped with Privacy Glass (With RPO AJ1 or AKO).

Tint Percentage:

Windshields are SOLAR glass with a light transmittance of $\geq 70\%$.

Front door glass are Solar glass with a light transmission of $\geq 70\%$.

Rear door glass, quarter windows and back windows can use either Solar glass ($\geq 70\%$) or Privacy glass, which has a light transmittance of (nominally) 20%.

*Basically, if the glass is 'light green' in color, it is solar glass. If it is the dark gray/black glass, it is Privacy glass.

Version	1
Modified	Released June 28, 2021

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
